TRANSMITTAL MEMO

To: Ángel Rodríguez, On-Scene Coordinator
Caribbean Environmental Protection Branch
U.S. EPA, Region II

From: Smita Sumbaly, Data Reviewer
RST 2, Region II

Subject: Puerto Rico Olefins Asbestos Site
Data Validation Assessment

Date: April 17, 2014

The purpose of this memo is to transmit the following information:

- Data validation results for the following parameters:

Asbestos PCM and TEM	100 Samples
Air	100 Samples
- Matrices and Number of Samples
- Sampling Dates: March 4 through 27, 2014

The final data assessment narrative and original analytical data package are attached.

U. S. ENVIRONMENTAL PROTECTION AGENCY

MEMORANDUM

DATE: April 17, 2014

TO: Ángel Rodríguez, On-Scene Coordinator
U.S. EPA, Region II

FROM: Smita Sumbaly
RST 2 Data Review Team

SUBJECT: QA/QC Compliance Review Summary

As requested quality control and performance measures for the data packages noted have been examined and compared to EPA standards for compliance. Measures for the following general areas were evaluated as applicable:

Data Completeness
Sample Collection, Holding Times, and Preservation
Blank Analysis
Sample Sensitivity
Monthly Report TEM Calibrations

Any statistical measures used to support the following conclusions are attached so that the review may be reviewed by others.

NARRATIVE

PCS No. 7133

SITE NAME: Puerto Rico Olefins Asbestos Site
PR 385 KM 5.4 Int., 127 Tallaboa Ponente,
Ward Penuelas, Puerto Rico

Laboratory Name: Batta Laboratories, 6 Garfield Way, Newark, DE.

INTRODUCTION:

The laboratory's portion of this case consisted of 100 air samples. Samples were collected between March 4 through 27, 2014. The Batta Lab Project numbers are L6888F and L6888G.

The laboratory reported No problem(s) with the receipt of these samples.

The laboratory reported problems with the analyses of Asbestos PCM and TEM. Laboratory received the sample filter damaged for Sample No. P0006-AS02-030414, therefore, this sample was not analyzed. Nineteen out of the 100 samples were overloaded, therefore not analyzed by PCM and TEM methods.

The evaluator has commented on the criteria specified under each fraction heading. All criteria have been assessed, but no discussion is given where the evaluator has determined that criteria were adequately performed or require no comment. Details relevant to these comments are given on the following forms.

Appropriate Form Is and Chain of Custody have been copied from the original data package and appended to the data assessment narrative for reference.

A.2.1 Validation Flags-

The following flags have been applied in red by the data validator and must be considered by the data user.

J-

This flag indicates the result qualified as estimated.

Red- Line-

A red-line drawn through a sample result indicates an unusable value. The red-lined data are known to contain significant errors based on documented information and must not be used by the data user.

Fully Usable Data-

The results that do not carry "J" or "red-line" are fully usable.

A.2.2 The data assessment is given below and on the attached sheets.

From March 4 through 27, 2014, U.S. EPA, Region II, RST 2 personnel collected 100 air samples, including two lot blanks and five field blanks, from the Puerto Rico Olefins Asbestos Site, located at PR 385 KM 5.4 Int., 127 Tallaboa Ponente, Ward Penuelas, Puerto Rico. Within 24 hours of collections, all samples were shipped via FedEx to Batta Laboratories, 6 Garfield Way, Newark, DE. The laboratory verified that the samples were received intact and properly custody sealed.

All 100 air samples for asbestos were collected on a 25 mm, 0.45 μ m MCEF cassettes. Samples were prepared and analyzed for asbestos according to Phase Contrast Microscopy (PCM) using NIOSH Method 7400, Revision 3, Issue 2 (8/15/94). The limit of detection for the air method is 5.5 fibers for 100 fields of views, or 7 fibers per square millimeters. All 100 samples were also analyzed for Transmission Electron Microscopy (TEM) by NIOSH Method 7402, Issue 2 (8/15/94). The target sensitivity for the air method is 0.0004 fiber/cc.

Out of 100 samples, laboratory received 19 samples over loaded and one filter was damaged for Sample No. P0006-AS02-030414 . One damaged sample was discarded and other 19 samples were requested to analyze by ISO method 13794:199(E): Ambient Determination of Asbestos Fibers-Indirect Transfer Electron Microscopy Method.

*Samples were overloaded with particulates, therefore not analyzed by asbestos PCM.

**Sample filter was received damaged, therefore, not analyzed.

Title: Evaluation of Asbestos Data
Data Assessment Narrative

Asbestos PCM analyses by NIOSH Methods 7400

Out of 27 samples, 18 samples were analyzed by PCM – NIOSH Method 7400. Eight samples were overloaded and one sample filter was broken, therefore not analyzed. All PCM data were reported in fibers/mm² and fiber /cc. Out of the 18 samples, two field blanks and one lot blank sample was reported as <7.0 fibers/mm² and other 15 samples were reported between 17.8 to 202.2 fiber/mm². Laboratory counted fibers in 100 fields for all samples, except 63 fields in Sample No. P0009-AS01-030614 and 66 fields in Sample No. P0009-AS03-030614. For PCM analysis, fibers greater than 5.0 um in length, width greater than 0.25 um with an aspect ratio of $\geq 3:1$ were reported. For QC purposes, the laboratory analyzed PCM daily reference standard, calibration, and reanalysis of one samples per batch. All QC results are acceptable.

The results presented for the Asbestos PCM samples are acceptable as reported. No qualifications were required.

Asbestos TEM analyses by NIOSH Methods 7402

Out of 27 samples, 18 samples were analyzed by TEM – NIOSH Method 7402. Eight samples were overloaded and one sample filter was broken, therefore not analyzed. All TEM data were reported in fibers/cc. Out of 18 samples, two field blanks, one lot blank, and 10 field samples, results were reported non-detected (below the sensitivity of 0.00040 f/cc). Laboratory opened the 40 grids and 0.3760 mm² area was analyzed. Out of 18 samples, asbestos was detected in only five samples. Sample concentrations are as below:

Sample # P0047-AS01-030414: The laboratory analyzed a total of 40 grids openings and found one fiber of chrysotile asbestos and 12 non-Asbestos fibers. Sample concentration was reported as 0.00028 f/cc, below the target sensitivity of 0.00040 f/cc.

Sample # P0047-AS02-030414: The laboratory analyzed a total of 40 grids openings and found one fiber of chrysotile asbestos and three non-Asbestos fibers. Sample concentration was reported as 0.00085 f/cc, above the target sensitivity of 0.00040 f/cc.

Sample # P0009-AS01-030614: The laboratory analyzed a total of 40 grids openings and found one fiber of Actinolite asbestos and 60.5 non-Asbestos fibers. Sample concentration was reported as 0.00033 f/cc, below the target sensitivity of 0.00040 f/cc.

Sample # P0057-AS01-030714: The laboratory analyzed a total of 40 grids openings and found one fiber of Anthophyllite asbestos and four non-Asbestos fibers. Sample concentration was reported as 0.00078 f/cc, above the target sensitivity of 0.00040 f/cc.

Sample # P0057-AS02-030714: The laboratory analyzed a total of 40 grids openings and found one fiber of chrysotile asbestos and 10 non-Asbestos fibers. Sample concentration was reported as 0.00030 f/cc, below the target sensitivity of 0.00040 f/cc.

The results presented for the Asbestos TEM samples are acceptable as reported. No qualifications were required.

* Samples were overloaded with particulates, therefore not analyzed by asbestos PCM and TEM.				

Title: Evaluation of Asbestos Data
Data Assessment Narrative

Asbestos PCM analyses by NIOSH Methods 7400

Out of 73 samples, 62 samples were analyzed by PCM – NIOSH Method 7400. Other 11 samples were overloaded, therefore not analyzed by PCM. All PCM data were reported in fibers/mm² and fiber /cc. Out of 62 samples, three field blanks, one lot blank sample, and Sample no. P0067B-AS01-031314 were reported as <7.0 fibers/mm² and other 57 samples were reported between 7.6 to 124.8 fiber/mm². Laboratory counted fibers in 100 fields for all samples, except 89 field were counted in sample No. P0046-AS01-032114. For PCM analysis, fibers greater than 5.0 um in length, width greater than 0.25 um with an aspect ratio of ≥3:1 were reported.

For QC purposes, the laboratory analyzed PCM daily reference standard, calibration, and reanalysis of one samples per batch. All QC results are acceptable.

The results presented for the Asbestos PCM samples are acceptable as reported. No qualifications were required

Asbestos TEM analyses by NIOSH Methods 7402

Out of 73 samples, 62 samples were analyzed by TEM – NIOSH Method 7402. Other 11 samples were overloaded, therefore not analyzed by TEM. All TEM data were reported in fiber /cc. Out of 62 samples, three field blanks, one lot blank sample, and 47 field samples were reported non-detected detected (below the 0.00040 f/cc). Laboratory opened the 40 grids and 0.3760 mm² area was analyzed. Out of 62 samples, asbestos was detected in only 11 samples. Sample concentrations are as below:

Sample # P0076-AS03-031014: The laboratory analyzed a total of 40 grids openings and found one fiber of Actinolite asbestos and 12 non-Asbestos fibers. Sample concentration was reported as 0.00020 f/cc, below the target sensitivity of 0.00040 f/cc.

Sample # P0065-AS01-031314: The laboratory analyzed a total of 40 grids openings and found one fiber of Chrysotile asbestos and 14.5 non-Asbestos fibers. Sample concentration was reported as 0.00024 f/cc, below the target sensitivity of 0.00040 f/cc.

Sample # P0065-AS02-031314: The laboratory analyzed a total of 40 grids openings and found 1.5 fiber of Chrysotile asbestos and 19.5 non-Asbestos fibers. Sample concentration was reported as 0.00024 f/cc, below the target sensitivity of 0.00040 f/cc.

Sample # P0068-AS01-031814: The laboratory analyzed a total of 40 grids openings and found one fiber of Actinolite asbestos and 22.5 non-Asbestos fibers. Sample concentration was reported as 0.00018 f/cc, below the target sensitivity of 0.00040 f/cc.

Sample # P0046-AS01-032114: The laboratory analyzed a total of 40 grids openings and found one fiber of Tremolite asbestos and 82.5 non-Asbestos fibers. Sample concentration was reported as 0.00019 f/cc, below the target sensitivity of 0.00040 f/cc.

Title: Evaluation of Asbestos Data
Data Assessment Narrative

Sample # P0004-AS01-032414: The laboratory analyzed a total of 40 grids openings and found one fiber of Chrysotile asbestos and 16 non-Asbestos fibers. Sample concentration was reported as 0.00022 f/cc, below the target sensitivity of 0.00040 f/cc.

Sample # P0005-AS01-032514: The laboratory analyzed a total of 40 grids openings and found two fibers of Chrysotile asbestos and 8 non-Asbestos fibers. Sample concentration was reported as 0.00044 f/cc, above the target sensitivity of 0.00040 f/cc.

Sample # P0005-AS02-032514: The laboratory analyzed a total of 40 grids openings and found one fiber of Chrysotile asbestos and 14.5 non-Asbestos fibers. Sample concentration was reported as 0.00032 f/cc, below the target sensitivity of 0.00040 f/cc.

Sample # P0005-AS03-032514: The laboratory analyzed a total of 40 grids openings and found four fibers of Chrysotile asbestos and 14 non-Asbestos fibers. Sample concentration was reported as 0.00036 f/cc, below the target sensitivity of 0.00040 f/cc.

Sample # P0049-AS03-032514: The laboratory analyzed a total of 40 grids openings and found one fiber of Anthophyllite asbestos and 19 non-Asbestos fibers. Sample concentration was reported as 0.00043 f/cc, above the target sensitivity of 0.00040 f/cc.

Sample # P0189-AS01-032714: The laboratory analyzed a total of 40 grids openings and found one fiber of Anthophyllite asbestos and 6 non-Asbestos fibers. Sample concentration was reported as 0.00095 f/cc, above the target sensitivity of 0.00040 f/cc.

For QC purposes, the laboratory analyzed lab blank and reanalysis of one samples per batch. All QC results are acceptable.

The results presented for the Asbestos TEM samples are acceptable as reported. No qualifications were required

TEM Standard Analysis

The laboratory performed TEM Standards, TEM routine alignment and calibrations, magnification and Spot Size calculations, Detector Resolution-Mn Standard, Chrysotile Beam Dose sensitivity (monthly), Camera Constant calibrations, Significant Na and resolvable Mg-Si Peaks (monthly), K Factors Calibration (annually), and daily TEM Calibrations. All calibrations met the "pass" criteria. No qualifiers were applied based upon this parameter.

Title: Evaluation of Asbestos Data
Data Assessment Narrative

Asbestos TEM analyses by ISO 13794:199(E)

Out of 100 samples, laboratory received 19 samples over loaded and one filter was damaged for Sample No. P0006-AS02-030414. The one damaged sample was discarded and other 19 samples were analyzed by ISO method 13794:199(E): Ambient Determination of Asbestos Fibers-Indirect Transfer Electron Microscopy Method.

TEM analysis was performed using a transmission electron microscope equipped with an EDS X-ray analyzer. The air samples were analyzed at approximate screen magnifications of 19,000X for asbestos structures greater than 0.5 micrometer lengths. An accelerating voltage of 100 KV was applied. The sizing of structures (analysis) was performed on either a JEM 100CX II microscope at approximately 19,000X magnification.

The project required target analytical sensitivity of this analysis is 0.00040 structure/cc; however, due to heavy particulate loading (>50% filter coverage regardless of particulate thickness) and serial dilution, the sensitivity of some samples could not be practically met. For some samples that have no fibers detected, the laboratory analyze the more Grid Openings (GOs) to lower the analytical sensitivity until at least one fiber is detected up to 100 GOs.

For air sampling, 0.45u, 25 mm MCE cassettes were used. Approximately 3500 liter volume was collected in approximately six hours period of time. The laboratory reported the primary and total number of structure detected and type of asbestos detected. All samples were evaluated under 100 grids to meet the project target analytical sensitivity of 0.00040 Structure/cc.

Out of 19 samples, two samples were reported as non-detected. For other 17 samples, the laboratory analyzed 15 to 100 grids openings from three separate grids and found 1 to 106 total structures of either chrysotile asbestos, Anthophyllite asbestos, Actinolite asbestos, and/or Tremolite asbestos. Detailed results summary are provided in Table 1.

A.2.3 Contract Problem/Non-Compliance:

Due to software limitations Client Sample ID number does not appeared in sample results data sheet. Data reviewer manually corrected the Client Sample ID numbers and initials it.

Laboratory reported the incorrect sample volumes for the six samples collected on March 26, 2014. Data reviewer manually corrected the sample volume in asbestos data sheet and initials it. Since all samples were overloaded and were not analyzed for Asbestos PCM and TEM, no action was required.

B - Field Blank
fibers/mm² - Fibers per millimeter square
fibers/cc - Fibers per cubic centimeter

CH - Chrysotile
AN - Anthophyllite

N/A - Not Applicable
ND - Non-Detected

Samples were overloaded with particulates, therefore not analyzed by asbestos PCM and TEM.

Project: Puerto Rico Olefins Asbestos Site
Sampling Dates: March 4 through 10, 2014

Batta Check List for Delivery Packages

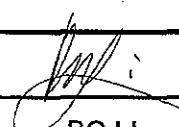

Company: BATTA LABORATORIES, INC. **EPA ID#:** DE 004
EPA CASE#: RFP 279 **LAB PROJ#:** L6888F
EPA SDG#: FB-A-030414 **Date Received:** MULTIPLE
Total Units: 27 **Sample Matrix:** Bulk Water
 Laboratory Reports/Sample Summary (check) Air
 PLM PCM TEM Moisture Particle Size
 Original (EPA/CLIENT) COC(s)
 EDD Copies (included in CD/DVD discs)
 N/A Prep Sheets
 Copy of Analytical Benchsheets
 QC Data
 Miscellaneous (Specified in the comment box below)

Case Narrative

This data package is pertinent to 4 sample shipment evnts under the EPA order RFP# 279 through Weston Solutions, Inc. Date of sample receiving and sample conditions, together with sample matrix information are documented on the client provided COC(s), EPA Region 2 SDG forms and/or custody forms. There are total of 27 ambient air samples received for analysis using the NIOSH 7400 (PCM) and NIOSH 7402 (TEM) methods. Of the 27 samples, 18 were analyzed for PCM due to either filter overloading or damages (see SDG DC-1 forms for details).

This data package only contains PCM analysis by the NIOSH 7400 method. Analysis by NIOSH 7402 TEM method is included in a separate data package. The detection limit defined by the method is 5.5 fibers for 100 fields of views, or 7 fibers per square millimeters.

The data package contains a hardcopy report and two data DVD/CD discs. The data discs contain a copy of the hardcopy report package in PDF format, plus EPA Region 2 EDDs or NADES EDDS whichever appropriate for each analysis. This data package contains both EDD formats. The hardcopy data package is organized with sections in the following manner: EPA Region 2 DC-2 Form, Batta Check List (w/ case narratives), SDG Cover Sheet, Summary Report of Analysis, EPA Region 2 DC-1 Form, Field COC, Communications, Miscellaneous, Nomenclature, Counting Rules, Data Validation and Calculation, Reanalysis, Standard Analysis, Calibrations and Routines, and NADES Data Sheet and Report.

X	COC	N/A	Prep Sheet	See Narrative EDD		
X	QA Data	X	Bench Sheet	N/A	MISC.	

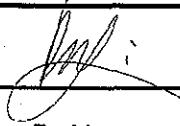

Case Narrative:

This data package is pertinent to 73 sample units under the EPA order RFP# 279A through Weston Solutions, Inc. Date of sample receiving and sample conditions, together with sample matrix information are documented on the client provided COC(s), EPA Region 2 SDG forms and/or custody forms. Of these 73 units, 62 were analyzed by the NIOSH 7400 method. The rest were deemed in the lab to be overloaded during the sample collection. Please refer to attached COCs and EPA Region 2 DC-1 for details.

This data package contains the analysis only by the NIOSH 7400 PCM method. The detection limit defined by the method is 5.5 fibers or 7 fibers/mm². Please refer to the Counting Rules, Data Validation and Calculation section of this package for details on how results were calculated and reported.

The data package contains a hardcopy report. Data DVD/CD discs that contain a copy of this hardcopy report package in PDF format plus EPA Region 2 EDDs or NADES EDDS whichever appropriate for each analysis will be shipped in a later time at the completion of the entire project for the purpose of data integrity. NADES EDD does not apply to this package. The hardcopy data package is organized with sections in the following manner: EPA Region 2 DC-2 Form (the inventory sheet), Batta Check List (w/ case narratives), SDG Cover Sheet, Summary Report of Analysis, EPA Region 2 DC-1 Form, Field COC, Data Validation and Calculation, Reanalysis, Standard Analysis, Calibrations and Routines, and NADES Data Sheet and Report. Reviewers who are not familiar with asbestos terminology and abbreviations used in this package are referred to the Nomenclature section featured in the first data package of this kind delivered at the beginning of this project.

ANALYST: JUDY XU

REVIEWED BY:

- * Sample results listed above are not blank-corrected.
- * Results pertain only to the items tested.
- * This report does not constitute endorsement by AIHA and/or any other U.S. government agencies.
- * Named analyst may not be sole analyst. Refer to Chain of Custody for additional analysts.
- * Sample volumes are calculated from data supplied by the client. Batta Laboratories, Inc. does not accept liability for results expressed in fibers per cubic centimeter. Furthermore, Batta Laboratories assumes no responsibility for the accuracy of results reflected by the use of improper collection techniques or equipment.
- * Current YTD intralaboratory Sr value is 0.22. This value may change slightly over time.

COUNTING RULES, DATA VALIDATION AND CALCULATION

METHOD: NIOSH 7400 Issue 2: 15 August 1994

Counting Rules:

**Fiber length: >5 μm
Width: >0.25 μm
Aspect Ratio: ≥3:1**

Data Validation and Calculation:

Effective Filter Area (i.e. Primary Filter Area in NADES Sheets): 385 mm^2

Calibrated Graticule Area (FOV in NADES Sheets): 0.00785 mm^2

Calculation Formula:

Fiber Density (fibers/ mm^2 or f/ mm^2) = number of fibers counted/(number of FOVs x area of FOV);

Or,

f/ mm^2 = number of fibers/(0.00785 x number of FOVs)1)

Note: blank counts were not subtracted from the counts of each field sample.

Fiber Concentration (fibers/ cm^3 or f/cc):

f/cc = (fiber density x filter area) / (volume in liter x 1000)2)

Example:

Lab Sample No. 786564;
EPA or Weston Sample No. P0047-AS03-030414
Air Volume: 3652.2 liter
Fiber Counts: 41.5
No. of FOV: 100

According to equation 1), the fiber density is:

$$\text{f/mm}^2 = \text{fiber counts}/(0.00785 \times \text{no. of FOV}) = 41.5/(0.00785 \times 100) = 52.866 \text{ or } 52.9 \text{ (f/mm}^2\text{)}$$

According to equation 2), the fiber concentration is:

$$\text{f/cc} = \text{fiber density} \times \text{filter area} / (1000 \times \text{volume}) = 52.866 \times 385 / (1000 \times 3652.2) = 0.00557 \text{ or } 0.006 \text{ (f/cc)}$$

How detection limit is calculated (see NADES sheet for explanation):

The detection limit is based on 5.5 fibers detected on a filter, which means any counts below 5.5 fibers will be reported as though 5.5 fibers were detected.

For instance, if the actual count is 1 fiber over 100 fields of view or graticule areas, the fiber density will be reported as 5.5/(0.00785x100) or 7.0064 (i.e. 7.0) f/mm² with the qualifier "<", and the concentration reported as 0.00074 f/cc or 0.001 f/cc with the qualifier "<".
